

Cost Savings While Going “Green”

FOG Free™ products help you trim budgets and protect the environment.

Here are some of the benefits:

- Because it is a natural, 100% organic, plant-based product, FFT products are affordable and efficient to manufacture. Market research shows our products provide great value with bulk pricing far below the closest competitor rates.
- Completely organic; no heavy metals, bacteria, enzymes or phosphates.
- pH neutral.
- Organically transforms insoluble fat, oil and grease to water soluble elements.
- Combines environmentally safe, toxic free components to keep environments clean.
- Prevents particle recombination, accelerates bio-degradation.
- Natural bacteria will bio-degrade fat, oil and grease, cleaning the environment.

Field trials and certification tests demonstrate our product's superior performance to quickly, efficiently and affordably clean fat, oil and grease from a variety of environments.

We stand behind our product performance with a commitment to customer service with speed and honesty.

FOG Free™

FOG Free™ is our primary product that eliminates fat, oil and grease in wastewater utility and industrial applications.

The product is made from plant-based, “green,” sustainable and eco-friendly properties. It is 100% organic, non-toxic, bio-degradable and does not leave behind caustic chemical compounds that may harm equipment or create bio-hazards.

Simply put: **FOG Free™** helps Mother Nature do her job faster by accelerating a clean, natural process.

Industrial applications include wastewater collection systems, gravity collection sewer / pipes, lift stations, vacuum truck cleaning and also wastewater plant applications.

Orange Flush™

Orange Flush™ packs a double-strength dose of our FOG Free™ product and combines it with a pleasing citrus aroma.

The result is a high-performance blend of fast-working, environmentally-friendly colloidal suspension to eliminate fat, oil and grease in a utility’s most problematic facilities. In addition, the natural orange scent helps cure even the most difficult odor issues caused by seasonal, high temperature and high humidity climates.

Waterwater utilities using the product say it is the most cost-effective and affordable application for FOG and odor treatment in today’s market.

Orange Flush™ is a lower cost alternative to some chemical mixtures made with di-limeonene, a citrus-scent additive that has drastically increased in price over the past several months.

Odor-Mite™

Odor-Mite™ has become one of our most popular and requested products by wastewater utilities nationwide.

The product is winning praise for eliminating odors in sewers and lift stations, which has helped stop public complaints that have plagued utilities for years.

The **Odor-Mite™** application actually began use in conjunction with **FOG Free™**, the bio-degrading agent for fat, oil and grease build-up in utility lift stations and gravity sewers.

In addition to eliminating foul odors, **Odor-Mite™** provides corrosion control in lift stations because the product is non-caustic and is non-reactant to carbon dioxide.
